US Arm Venous Duplex Bilateral

- Image the Right and Left Upper Extremity Veins from the Jugular vein to the Distal Brachial vein.
- Using dual mode image transverse of the jugular vein, axillary vein and brachial vein at proximal, mid, and distal in gray scale without compression and with compression. If clot is present, document as without compression/clot.
- Image all the vessels, jugular vein, subclavian vein, axillary vein, and brachial vein with color flow and spectral Doppler.
- Make sure to document if there is clot in the basilic vein.
- For outpatients you MUST show to the radiologist.
- The radiologist must call the provider with results BEFORE you let the patient leave. Depending on where the clot is located, the patient may need to go to the ED.

US Arm Venous Duplex Unilateral/LTD

Same as above IMG13445 Arm Venous Duplex Bilateral, but limited to either the right or the left upper extremity as indicated on the order.

- For outpatients you MUST show to the radiologist.
- The radiologist must call the provider with results BEFORE you let the patient leave. Depending on where the clot is located, the patient may need to go to the ED.

US Extremity Non-Vascular Limited Area

- Imaging of the upper/lower extremity area as specified by the provider in longitudinal and transverse.
- With and without color.
