US Renal Transplant w/Doppler

- Longitudinal images to include lateral, mid, and medial images of the renal transplant.
- Include a longitudinal image mid transplant with color Doppler flow.
- Include the entire kidney.
- Transverse images to include superior, mid, and inferior poles.
- Measure longitudinal, AP, and transverse.
- With color and spectral Doppler, record the RI of the MRA and the arcuate in the superior, mid, and inferior poles.
- Image the MRV with color and spectral Doppler.
- Image the urinary bladder in longitudinal and transverse. If empty, image the area.
- Measure a pre and post void volume when indicated.
