US Pelvis w/Transvaginal

Same as IMG13422 Pelvis Transabdominal Complete with additional endovaginal probe imaging.

Pelvis Transabdominal Complete:

- Series of images in the sagittal and transverse plane of the uterus, ovaries, and adnexa in the transabdominal approach.
- Include sagittal, AP, and transverse measurements of the uterus, ovaries and any pathology.
- AP measurement on the endometrium.
- Document arterial and venous flow within the ovaries if the indication is for pain.
- If the indication is for retained products, you must include images of the endometrium using color Doppler.
- Include sagittal and transverse images of both kidneys.
- Measure the kidneys in sagittal, AP, and transverse planes.

Additional imaging using the endovaginal probe:

- You will again image the uterus, ovaries, and adnexa in the coronal and transverse plane.

**Any Transvaginal ultrasound performed by a male technologist MUST have a female chaperone present in the room.

Any Transvaginal ultrasound ordered for a minor (<18) MUST have parental/guardian consent obtained by a radiologist. Exceptions to this are listed on page 6 of the core policy CP2.10, Informed Consent for Treatment. **

US Pelvis w/Transvaginal and Doppler

Same as IMG13424 Pelvis with Transvaginal above, with additional Doppler imaging.

- You MUST document arterial and venous flow with color and spectral Doppler.

**Any Transvaginal ultrasound performed by a male technologist MUST have a female chaperone present in the room.

Any Transvaginal ultrasound ordered for a minor (<18) MUST have parental/guardian consent obtained by a radiologist. Exceptions to this are listed on page 6 of the core policy CP2.10, Informed Consent for Treatment. **
